

ZEROSIXTYTHREE + 063 SOCIETY

Website Development and Partnership Proposal

Prepared for: ZeroSixtyThree Management / Owner

1. Project Overview

This proposal covers the complete development of a professional and mobile-friendly website for ZeroSixtyThree. The website will also include a dedicated page for 063 Society.

The website will present both service directions clearly, allow customers to send booking requests, and provide management with a basic admin side for customer and booking records.

The complete agreed scope will be developed for the special fee of **PHP 35,000**. No approved website deliverable will be removed because of the adjusted price.

2. Complete Website Scope

- Professional landing page
- Main pages: Home, About, Services, Portfolio / Testimonials, and Contact
- Dedicated 063 Society page within the same website
- Mobile-friendly design for phones, tablets, and desktop computers
- Inquiry and booking form
- Email notifications for new inquiries
- Basic SEO setup
- Meta Pixel integration for website activity tracking
- Secure deployment and hosting setup
- Basic admin side for customer and booking records
- Final testing and website handover

3. ZeroSixtyThree and 063 Society

ZeroSixtyThree will remain the main business identity. 063 Society will have its own page for weddings, corporate events, event program support, music and entertainment, and audio-visual or production services.

A separate 063 Society website or separate domain is not included in this phase.

BOOKING AND BASIC ADMIN SIDE

4. Customer Booking Information

Customers will complete a booking or inquiry form on the website. Their information will be stored in the basic admin side.

The form may collect:

- Customer name
- Email address and mobile number
- Event type, date, and location
- Requested services
- Estimated number of guests, when applicable
- Additional requirements or notes

5. Basic Admin Side

The Website Developer will include a basic and secure admin side based on the requirements discussed and approved before development begins.

The basic admin side may include:

- Secure admin access
- Customer information and booking details
- Source of inquiry: ZeroSixtyThree or 063 Society
- Booking status: New, Confirmed, Paid, Cancelled, or Refunded
- Actual amount collected from each paid customer
- Automatic calculation of the Developer's 2% partnership share
- Automatic generation of a Developer partnership invoice or billing statement
- Monthly summary of paid customers and Developer shares
- Basic record viewing, searching, and filtering

The basic admin side is for simple customer and partnership tracking. It is not a full accounting system, advanced CRM, payment gateway, or complex booking automation platform.

The admin features included in the PHP 35,000 fee are limited to the requirements agreed upon before development. New modules or major workflow changes requested later will be quoted separately.

6. Firebase Database

Firebase will store the customer, booking, payment-status, and Developer partnership records used by the basic admin side.

The project will start on the Firebase free tier, so no paid database subscription is required at launch. ZeroSixtyThree management or the owner will provide and maintain the approved Firebase account.

If website records later exceed the free tier and a paid Firebase plan becomes necessary, that fee is separate from the PHP 35,000 development fee and the PHP 2,000 monthly website support fee.

6.1 Photo and Video Hosting

Photos are stored inside the website itself and are published together with the site. No separate photo hosting account or monthly fee is required.

Videos will be stored in the ZeroSixtyThree YouTube account and displayed on the website. Because this is free, advertisements may appear before or after a video. This is controlled by YouTube and not by the Website Developer.

If a private, ad-free video player is preferred, this requires a paid subscription to a separate third-party video platform such as Streamable. The subscription fee would be shouldered by management and is separate from the PHP 35,000 development fee and the PHP 2,000 monthly website support fee.

FEES AND MONTHLY SUPPORT

7. Website Development Fee

PHP 35,000

This fee covers the complete approved website scope, including the basic admin side and initial partnership tracking features.

The adjusted price will not reduce any approved deliverable. Work outside the agreed scope will be discussed and quoted before implementation.

8. Monthly Website Support

PHP 2,000 per month

The monthly support includes:

- Website and basic admin-side availability checking
- Basic technical support for existing approved functions
- Checking and correcting basic errors within the approved scope
- Up to one development hour for minor information or photo updates each month

The PHP 2,000 monthly support fee is separate from the Developer's 2% partnership share.

9. Minor Updates Covered by Monthly Support

- Replacing an existing photo
- Correcting or updating existing text
- Updating contact information
- Replacing an existing testimonial
- Updating existing service information

Minor updates must remain within the existing website structure and the one-hour monthly allowance.

10. Major Changes Quoted Separately

- New website pages or sections
- Major page or layout redesign
- New forms or booking workflows
- Payment gateway integration
- New admin modules or user roles
- Advanced reports or accounting features
- Database restructuring or automation
- Separate website or domain for 063 Society

These requests will be reviewed and quoted separately before work begins.

11. Development Tools & Services

Next.js — frontend and web application development

Tailwind CSS — responsive UI styling

Firebase — database, authentication, storage, and backend services

Free Web Hosting — deployment via free hosting tier

Database subscription: none at project start. The Firebase free tier is used, and a paid plan applies only if usage later exceeds it.

DEVELOPER REVENUE PARTNERSHIP

11. Developer's 2% Partnership Share

In addition to the PHP 2,000 monthly website support fee, the Website Developer will receive a two percent (2%) partnership share from every confirmed and paid booking generated through either the ZeroSixtyThree pages or the dedicated 063 Society page.

The 2% share will be based on the actual amount collected from each customer.

When management marks a booking as Paid and records the collected amount in the admin side, the system will automatically calculate the Developer's 2% share and generate the Developer partnership invoice or billing statement.

The 2% applies separately to every confirmed and paid customer booking. If the same customer makes another separate paid booking, that booking will also be included.

All Developer partnership shares will be summarized and paid every month. Management will provide access to the monthly record of paid bookings, collected amounts, and calculated Developer shares.

Cancelled, fully refunded, and unpaid inquiries are not included. For partial payments, the 2% share applies only to the amount actually received during that month.

The system-generated invoice records the amount payable to the Website Developer. It does not automatically transfer the payment. Management remains responsible for settling the invoice within the agreed monthly payment period.

11.1 Partnership Share Cap — AED 250 Maximum per Booking

The Developer's 2% partnership share is subject to a maximum cap of **AED 250 per confirmed and paid booking**.

- If the computed 2% is AED 250 or lower, the full 2% amount applies.
- If the computed 2% is higher than AED 250, only AED 250 will be recorded and payable for that booking.
- The cap applies per booking, not to the monthly total. Each booking is capped separately, then combined into one monthly Developer invoice.

Example: A booking collects AED 15,000. The computed 2% is AED 300. Since this is higher than the cap, the recorded Developer share for that booking is **AED 250**.

11.2 Returning Customer Tracking

The admin side will include a returning customer indicator so that both parties can clearly identify and track repeat bookings.

The returning customer tracking will include:

- A Returning Customer tag or flag on the customer or booking record
- Indication of whether the customer was originally acquired through the website
- Record of previous bookings of the same customer for reference
- Inclusion of qualified returning customer bookings in the monthly Developer summary and invoice

Qualified for the 2% partnership share:

- A returning or repeat booking of a customer whose first booking was originally generated through the ZeroSixtyThree pages or the dedicated 063 Society page

- Each qualified repeat booking is computed separately and remains subject to the AED 250 maximum cap per booking

Not included in the 2% partnership share:

- Bookings received outside the website, such as phone calls, WhatsApp messages, direct messages, walk-ins, or face-to-face transactions
- Returning customers whose original booking did not come from the website
- Cancelled, fully refunded, and unpaid bookings

Management will mark the source of each booking in the admin side. Only bookings recorded as originating from the website, including their qualified repeat bookings, will be included in the Developer partnership share.

12. Partnership Term and Renewal

The initial Website Support and Developer Revenue Partnership will remain active for twelve (12) months from the official website launch date.

After the initial term, the partnership may be renewed for another twelve (12) months through mutual written agreement.

During the renewed term, the PHP 2,000 monthly website support fee and the 2% Developer partnership share will continue unless both parties approve different terms in writing.

13. Simple Scenario

A customer books a corporate event through the ZeroSixtyThree website and pays **AED 10,000**.

AED 10,000 x 2% = AED 200 Developer share

After management marks the booking as Paid, the admin side records AED 200 and includes it in the Developer's monthly invoice.

For that month, the Website Developer receives **AED 200** for this booking plus the separate **PHP 2,000 monthly support fee**.

If the same customer books again through the website, that repeat booking is tagged as a Returning Customer and is also included, computed separately and subject to the same AED 250 maximum cap.

If several customers pay during the same month, the system calculates 2% for each customer and combines the amounts in one monthly Developer invoice.

TIMELINE, EXCLUSIONS, AND ACCEPTANCE

14. Estimated Timeline

Estimated completion is 1 month from the confirmed project start.

The timeline begins after approval and receipt of the required logos, service information, photos, videos, testimonials, contact details, domain access, Meta Business access, Firebase account access, and other approved materials.

Delayed content, access, approvals, or major scope changes may affect the completion date.

15. Costs and Functions Not Included

- Trainable AI chatbot
- Full CRM or advanced admin planner
- Twilio SMS verification or SMS notifications
- Online payment processing
- Separate standalone 063 Society website
- Firebase paid plan fees and other paid third-party subscriptions
- Google Ads or Meta Ads creation and management
- Major functions not stated in the approved scope

16. Acceptance

By signing below, both parties confirm that they understand and accept the website scope, development fee, monthly support fee, basic admin features, Firebase database requirement, Developer revenue partnership, the AED 250 maximum partnership share cap per booking, the returning customer tracking terms, and renewal terms stated in this proposal.
